I am an AI researcher at **KRAFTON**, working on the evaluation of large language models and speech models. I assess model capabilities and examine their behavior in conversational and agentic settings.

During my M.S. at **KAIST**, I studied the **loss landscape** of neural networks. After graduating, I worked on computer vision at **SAIGE**, particularly image anomaly detection and **language-assisted vision**.

Experience

KRAFTON

Seoul, Korea

2026. 08 – Now

AI Researcher

- Evaluate large language models and speech models.
- Assess model capabilities and examine their behavior in conversational and agentic settings.

SAIGE

Seoul, Korea

AI Lab

2023. 03 – 2026. 07

AI Researcher

- Research on image anomaly detection (IAD) systems for industrial inspection.
- Research language-assisted vision models for data-efficient training.
- Conduct TensorRT-based optimization for real-time inference in object detection and tracking.
- Fine-tune VLMs for context-aware industrial safety monitoring.

Artificial Intelligence Institute of Seoul National University (AIIS)

Seoul, Korea

Deep Representation Learning Research Group (DRL)

2020. 07 – 2020. 09

Research Intern

- Supervisor: Professor **Wonjong Rhee**
- Researched techniques for enhancing model interpretability through the analysis of activation on-off patterns.
- Reproduced CNN visualization methods, such as Grad-CAM and (C)LRP.

Electronics and Telecommunications Research Institute (ETRI)

Daejeon, Korea

Artificial Intelligence Research Laboratory

2020. 01 – 2020. 02

Research Intern

- Supervisor: **Yoo-mi Park**
- Conducted testing and debugging on the ETRI Deep Learning HPC Platform Dashboard.
- Implemented AlexNet and ResNet architectures using DL-MDL as example models for the platform.

Education

Korea Advanced Institute of Science and Technology (KAIST)

Daejeon, Korea

Graduate School of AI

2021. 03 – 2023. 02

M.S. in Artificial Intelligence

- Supervisor: Professor **Juho Lee**
- Lab: Statistical Inference and Machine Learning Lab (SIML)
- Thesis: *Traversing Between Modes in Function Space for Fast Ensembling*
- Research interests: Loss landscape, Neural processes

SungKyunKwan University (SKKU)

Seoul, Korea

Department of Computer Science and Engineering, College of Computing

2017. 03 – 2020. 08

B.S. in Computer Science and Engineering

- Total GPA: 4.33 / 4.5
- Major GPA: 4.47 / 4.5

Publications

Conference

ELDET: Early-Learning Distillation with Noisy Labels for Object Detection — NeurIPS
Dongmin Choi, Sangbin Lee, **EungGu Yun**, Jonghyuk Baek, Frank C. Park — *2025*

Language-Assisted Feature Transformation for Anomaly Detection — ICLR
EungGu Yun, Heonjin Ha, Yeongwoo Nam, Bryan Dongik Lee — *2025*

A Simple Early Exiting Framework for Accelerated Sampling in Diffusion Models — ICML
Taehong Moon, Moonseok Choi, **EungGu Yun**, Jongmin Yoon, Gayoung Lee, Jaewoong Cho, Juho Lee — *2024*

Learning Dynamic Brain Connectome with Graph Transformers for Psychiatric Diagnosis Classification — IEEE ISBI
Byung-Hoon Kim, Jungwon Choi, **EungGu Yun**, Kyungsang Kim, Xiang Li, Juho Lee — *2024*

Probabilistic Imputation for Time-series Classification with Missing Data — ICML
SeungHyun Kim*, Hyunsu Kim*, **EungGu Yun***, Hwangrae Lee, Jaehun Lee, Juho Lee (*: Equal contribution) — *2023*

Traversing Between Modes in Function Space for Fast Ensembling — ICML
EungGu Yun*, Hyungi Lee*, Giung Nam*, Juho Lee (*: Equal contribution) — *2023*

Martingale Posterior Neural Processes — *Spotlight* ICLR
Hyungi Lee, **EungGu Yun**, Giung Nam, Edwin Fong, Juho Lee — *2023*

Scale Mixtures of Neural Network Gaussian Processes — ICLR
Hyungi Lee, **EungGu Yun**, Hongseok Yang, Juho Lee — *2022*

Workshop

Large-scale Graph Representation Learning of Dynamic Brain Connectome with Transformers — TGL @ NeurIPS
Byung-Hoon Kim, Jungwon Choi, **EungGu Yun**, Kyungsang Kim, Xiang Li, Juho Lee — *2023*

A Generative Self-Supervised Framework using Functional Connectivity in fMRI Data — TGL @ NeurIPS
Jungwon Choi, Seongho Keum, **EungGu Yun**, Byung-Hoon Kim, Juho Lee — *2023*

Early Exiting for Accelerated Inference in Diffusion Models — SPIGM @ ICML
Taehong Moon, Moonseok Choi, **EungGu Yun**, Jongmin Yoon, Gayoung Lee, Juho Lee — *2023*

Journal

Recent advances of radiative transfer emulator in WRF model — KOMES
Hwan-Jin Song, Soonyoung Roh, Park Sa Kim, Juho Lee, Giung Nam, **EungGu Yun**, Jongmin Yoon — *2022*

Benefits of stochastic weight averaging in developing neural network radiation scheme for numerical weather prediction — JAMES
Hwan-Jin Song, Soonyoung Roh, Juho Lee, Giung Nam, **EungGu Yun**, Jongmin Yoon, Park Sa Kim — *2022*

Preprint

On-Off Pattern Encoding and Path-Count Encoding as Deep Neural Network Representations — arXiv
Euna Jung, Jaekeol Choi, **EungGu Yun**, Wonjong Rhee — *2020*

Academic Services

Reviewer for **NeurIPS**	2023, 2024, 2025 (Top reviewer ∼8%)
Reviewer for **ICML**	2025
Reviewer for **ICLR**	2024, 2025
Reviewer for **AAAI**	2025, 2026
Reviewer for **Pattern Recognition**	2026

Awards & Honors

The National Scholarship for Science and Engineering *2019 Spring – 2020 Spring*

Korea Student Aid Foundation (KOSAF)

- Supports undergraduates with strong academic performance in science and engineering.

SungKyun Software Scholarship *2017 Spring – 2018 Fall*

SungKyunKwan University (SKKU)

- Supports students with an outstanding GPA.

Dean's List Award *2017 Spring – 2019 Fall*

College of Computing, SungKyunKwan University (SKKU)

- In recognition of high scholastic achievement. (6 times)

Projects

Bayesian inference for time-series data with missing values *2022. 08 – 2023. 02*

Samsung Research

- Developed a Bayesian deep learning method that can quantify uncertainty of missing values.
- Proposed a multivariate time-series classification model using a regularization method called ObsDropout.
- Validated the proposed method on PhysioNet 2012, MIMIC-III, and UCI human activity datasets.

Developing artificial intelligence based emulator for physics processes in numerical models *2021. 05 – 2022. 07*

National Institute of Meteorological Sciences (NIMS)

- Researched alternative AI-based techniques for physical processes in the numerical weather prediction (NWP) model to reduce computational costs and improve accuracy.

Skills

Programming	Python, JavaScript, C, C++, LaTeX
Deep Learning	PyTorch, JAX (+ TPU)
System	Linux, Docker, Google Cloud Platform
Languages	Korean (native), English (intermediate)
